## OUR WORKING PROCESS

On the farm, both for basic and clinical nutrition, large amounts of **nutrients and additives** are used, in order to enhance the health and performance levels of the animals.

The **trade** offer for farmers and their consultants, animal husbandry experts or veterinarians, includes many options; however choosing those which are really effective and provide a good **quality/price** ratio is often difficult.

**Duregger** is the development of a family-run business which has always been involved, ever since its incorporation, in livestock nutrition, starting from a regional level then branching out across the country and internationally.

It all started with its founder, **Corrado Duregger**, and since the 1960s his achievements have been enhanced by the energy and enterprising approach of the second generation, leading to solid and far-sighted progress by the company, with market recognition.

In a world where raw materials and products are easily within everyone's reach, **Duregger** works every day in order to learn and implement the most interesting innovations, making them available to people and companies.

«THE ADDITIVES USED FOR FARMING PRODUCTIVE AND OTHER LIVESTOCK ACTUALLY LEAD TO AN IMPROVEMENT OF PRODUCTION, REPRODUCTION AND HEALTH PERFORMANCE LEVELS WHICH CAN BE OBJECTIVELY AND CLEARLY MEASURED»

An additive, or the purpose for which it has been formulated, needs to follow the rules which science has taught us.

- Be a product of **know-how** and scientific **research**.
- Show a clear **action mechanism**.
- Have plausible **effectiveness**.
- Be complemented by **field tests**.
- Be **acknowledged** by the reference communities.

**DUREGGER**

**We research** and select worldwide, those solutions which, in terms of product and service, can be expected to give the farmers who use them concrete and measurable economic benefits.

**We regard** field tests as a fundamental element to ensure the quality and safety of products, making sure that an additive becomes an opportunity and is not considered merely a cost, but rather an actual investment for the farmer and the industry.

## ✓ SYSTEMATIC REFERENCE TO RESEARCH MATERIALS

published on major journals, regarding both animal health and production science issues.

## ✓ SYSTEMATIC REFERENCE TO PROCEEDINGS

from national and international conferences where applied research and technological development work are presented.

## ✓ SYSTEMATIC REFERENCE TO MAINSTREAM PUBLICATIONS

## ✓ PARTICIPATION

in major national and international trade fairs.

## ✓ DIRECT CONTACTS

with large companies producing animal feed additives.

## OUR TARGETS

**Manufacturers**  
of animal feed.

**Farmers**  
of any kind of livestock  
and pets.

**Integrated supply chains**

# DUREGGER

All **livestock** and **pets** have the right to be respected based on their nature and specificities; we believe that they need to be fed correctly, following the most recent guidelines on the subject of **animal feed**, with a view to meeting their requirements according to their genetic traits and in case of need.

# BASIC PRODUCTS

The **basic raw materials**, fundamental for the formulation and production of feed for the industrial farming of livestock and pets, are the **core business** of our company: it is a job we know well, which **requires planning and organisation**.

**Duregger**, through careful selection of its suppliers, guarantees the best products at the most advantageous prices on the market, **ensuring stringent quality standards and in compliance with EU regulations**.

We are able to serve our customers all over Italy following a **just-in-time** approach, in order to optimise production process and reduce costs for storage, management, loading and unloading.

# FUNCTIONAL PRODUCTS

Today it is possible to respond in a targeted manner to a new way of feeding animals. **Nutraceuticals**: this term was coined in 1989 by doctor *Stephen De Felice*; it combines two words «*nutrition*» and «*pharmaceutics*», with reference to a new research area which studies and recognises, in some food and substances of natural origin, actual functional and medication properties.

**The term nutraceuticals** refers to the active ingredient, that is to say the organic substance which has rebalancing, preventive and protective properties; however it is commonly used also to define any food product which, on its own or with an additive, contains these functional substances.

**“Nutraceuticals  
for production livestock”**

NUTRITION

# B2B PRODUCTS

**Duregger** was established as a Business-to-Business enterprise for animal husbandry, guaranteeing throughout the production chain, procurement, planning, monitoring and technical-commercial services.

Today we deliver vitamin-mineral feed additives and pre-mixes both conventional and organic, in powder or liquid form. We trade in amino acids, vitamins, trace elements and macro minerals with major companies in Europe and in the rest of the world.

Our products are top-of-the-range, guaranteeing safety, compliance with EU standards and duly certified.

The awareness about healthier animal nutrition and safeguarding typical and supply chain products, are values which the **Duregger family** has always shared, fully embracing the underlying principles of organic farming: safety, identity, ethics and traceability as production benchmarks for business and environmental sustainability.

For a type of animal husbandry where the use of chemicals is greatly reduced and strictly controlled, as well as for healthier animal nutrition, **Duregger formulates organic feed** for farms which have chosen the healthiest and most natural ways of production.

All the feed is produced using raw materials produced in compliance with standards on organic food products (EC Reg. 834/2007); after arriving at the factory they are checked again, by external certified labs, to make sure that they no plant chemicals or GMOs have been used.

## DUREGGER: ALL ABOUT NUTRITION

**Duregger** is a reliable and safe partner for farmers searching for technical raw materials, feed additives and innovative products to make their business more productive.

The ability and expertise in **trading** actually involves selecting a number of products from all over the world which make it possible, from a nutritional and functional standpoint, to procure the best raw materials in terms of safety and reliability. All **Duregger** products undergo inspection from a Technical Commission to make sure that they meet EU health requirements, through preventive self-check tests, validating their technical efficiency and market launch procedure.

**Guaranteeing food safety** involves all aspects of the production chain as a single process, starting from primary production, the production of feed and food products, to the sale or delivery of food products to the final consumer, all elements having a potential impact in terms of food safety.
